

Bioclean Glue roll Cleaner

Apex have developed a special Glue roll cleaner. It is suitable for the removal of all kinds of pollution to glue rolls and to the surface of the Corrugator equipment that might be polluted with glue, like: glue rolls, doctor rolls, glue tanks, glue pumps- and pipes, glue barrels, additional fittings.

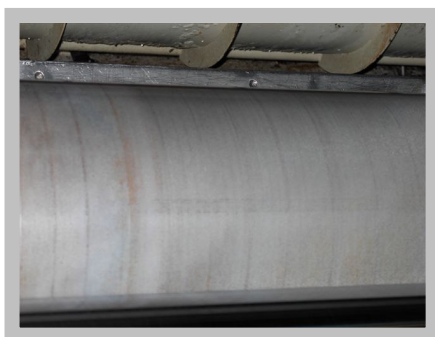

BioClean Glue Roll Cleaner is a fluid, sour cleaning concentrate suitable for periodical cleaning directly in the machine, with a nice lemon scent. The liquid easily dissolves glue remnants, lime, etc. and is suitable for all types of glue. No foam occurs, therefore, the liquid does not give problems at the circulation. Like other Bioclean liquids, it is safe for environment, operator and machine. The Glue roll cleaner is available in packages of 10 kg and 25KG, a Drum of 200 kg and a Multibox of 1065 kg.

The liquid is tested within several Corrugated plants and two of them gave the following positive references:

“At the BioClean Glue Roll Cleaner deliverer’s request we confirm that cleaning the glue roll with the help of the cleaner in our plant gave the intended effect. The roller was completely cleaned. The process was not time-consuming. The cleaner is safe and is not a menace to the environment. Its smell isn’t troublesome. We did not confirm any negative influence in the machine.”

“We regularly use BioClean Glue Roll Cleaner and we do recommend this product. We confirm that cleaning of the glue roll with this product on our new Corrugator gave the satisfactory effect. The rolls were completely cleaned. The process was not time-consuming and involved only one mechanic for two hours to supervise. There was no need for mechanical cleaning by means of brushes, etc. The lemon scent is pleasant in this environment.”
